SUMMARY

Backend Software Engineer with 5 years building high-throughput, event-driven microservices across logistics and e-commerce. Core strengths in Java / Spring Boot, distributed systems, and production reliability.

TECHNICAL SKILLS

Languages: Java (primary), C++, C#

Backend: Spring Boot, REST APIs, Microservices, Hibernate / JPA, Multithreading

Distributed Systems: Apache Kafka, Event-Driven Architecture

Data Stores: PostgreSQL, MySQL, Redis

Testing & Practices: JUnit, Mockito, Code Reviews, On-call/Production-support

AI-Assisted Dev: Cursor, Claude, ChatGPT, Prompt Engineering

EXPERIENCE

Software Development Engineer 2

Mar 2023 – Present

DP World · Gurgaon, India

Backend engineer on the CARGOES Runner logistics platform, building and operating the multi-tenant, event-driven Shipment Service that powers freight forwarding workflows in 100 countries.

- Cut p95 latency on shipment APIs serving 1M+ requests/month by **73%** (2.7s → 730ms) by parallelizing independent downstream calls with `CompletableFuture`, introducing Redis caching, and optimizing data-access patterns.
- Integrated the cargo.one e-booking marketplace into the air-cargo flow via Kafka webhook ingestion, auto-syncing carrier-booking and MAWB data back to shipments and eliminating manual re-keying.
- Designed and shipped a two-stage Dangerous Goods approval workflow modeled as a status state machine (DG → commercial sign-off) — request / approve / reject / withdraw transitions, approver remarks, audit logging, and automated email notifications — enforcing regulatory sign-off before hazardous cargo could be booked.
- Re-engineered the export-report pipeline with config-driven sync/async execution and rate limiting, eliminating recurring production outages.

Software Development Engineer 1

Mar 2022 – Mar 2023

Amazon · Bangalore, India

Full-stack engineer on the Tier-1 Address & Relationship Services team, delivering customer-address experiences across 180+ countries.

- Led the global rollout of the “Set as Default” feature on Amazon Address (mobile / tablet), driving **\$250K+** in incremental annual revenue.
- Mitigated browser-based spelljacking vulnerabilities, strengthening the security of customer address data.
- Re-architected Language APIs to reduce language-mismatch errors and improve localization accuracy.

Software Engineer

Aug 2021 – Mar 2022

OYO Rooms · Gurgaon, India

Backend engineer on the FinTech platform powering 460,000+ rooms across 8 countries, focused on reconciliation and core financial services.

- Unified the India and global reconciliation calculation stacks, cutting reconciliation processing time by **65%**.
- Built and optimized core financial backend services in Java and Spring Boot, using multithreading to improve throughput and reliability.

EDUCATION

B.Tech, Electronics & Communication Engineering 2017 – 2021

Delhi Technological University (DTU/DCE), Delhi · GPA 7.53 / 10

ACHIEVEMENTS

- LeetCode Annual Badge — awarded to the top 0.12% of users globally.
- Ranked Top 1% among DTU participants on GeeksforGeeks.
- Kudos Award, DP World — recognized for exceptional ownership and high-impact delivery.
